Bonn, 14 May 2014

Dear Dr. Sandell,

The attached Cycle1_GR_OT_01_0051_GSandell_2.class file contains the processing steps to create the level 3b data products (.lmv files and aver.great file), incl.

- removal of a first order spectral baseline
- rms weighted gridding of the data and average of the single positions

We recommend the use of a recent version of the CLASS software which is part of the GILDAS software package (see <http://www.iram.fr/IRAMFR/GILDAS/>).

Notes:

We provide AFFTS data only as the data during the November 2013 was observed only with this spectrometer. If you also want the XFFT data for the February observations, please let me know.

If you have any questions please do not hesitate to contact me.

Best regards,

Miguel Angel Requena Torres
GREAT liaison
