Bonn, 08 November 2013

Dear Dr. Sahai

The attached Cycle1_GR_OT_01_0138_RSahai.class file contains the processing steps to create the level 3b data products (aver.great files), incl.

- removal of a first order spectral baseline
- rms weighted average of the spectra at each position

We recommend the use of a recent version of the CLASS software which is part of the GILDAS software package (see <http://www.iram.fr/IRAMFR/GILDAS/>).

Notes on special processing steps:

1. The data from April flights have been recalibrated with the latest version of the Kosma software and is included here again.

If you have any questions please do not hesitate to contact me.

Best regards,

Miguel Angel Requena Torres
GREAT liaison
